

SpringCM® Cloud Solutions

EXTEND AND ENABLE SHAREPOINT

WHY EXTENDING SHAREPOINT WITH SAAS-BASED CONTENT MANAGEMENT CAN ACCELERATE BUSINESS

More businesses rely on Microsoft SharePoint than ever. Once organizations go beyond file sharing and store and retrieve, however, they encounter significant cost, complexity, and functionality challenges. SharePoint users soon learn that add-ons are required, leading to potentially prohibitive costs, drawn-out implementation procedures, and time-wasting “on the job” training processes. Without a generous budget and a well-staffed IT department to constantly add and update the software, a fully integrated solution using SharePoint alone remains out of reach.

TO EXTEND OR NOT EXTEND

Business users faced with the challenge to make their processes more efficient look to their IT departments for answers: How can we make SharePoint do what we need it to do to support workflow around our document-intensive processes? One way is to build the solution with SharePoint. Another is to seek out best-of-breed solutions that can extend the power of your existing SharePoint investment. For example, you can find solutions that already integrate document management and workflow around business processes like invoice automation, case management, resume management, or contract management. These solutions fully integrate OCR, IDC, fax in addition to workflow for routing and approval, and eForms for vendor inquiries. Companies have tried this path in the past. Their environment soon looked like any other on premise software deployment and suffered from similar setbacks.

“Consider the true cost of ownership of SharePoint Products. Additional costs related to customizations and implementation services can increase the total cost of ownership dramatically, bringing it closer to the costs of traditional enterprise content management (ECM) solutions.”

GARTNER

THE SINGLE SOLUTION

SharePoint is fine for collaboration and basic content management. But if you're looking for ways to improve overall efficiency, better manage operational processes, increase revenue, ensure compliance, and create new assets from your content management system, SpringCM offers an easy, fast, and affordable alternative to the costs and complexities of building an extended SharePoint solution on your own.

SpringCM delivers enterprise-class document management and workflow in a cloud (or SaaS) environment. As a subscription-based internet service, there's no software to install and no need to buy and manage hardware. SpringCM enables business users and analysts to configure and implement a complete content management solution without big upfront capital costs. The solution can be implemented and delivering results in days rather than months of IT coding required from on-premise content management software.

Accessed by a web browser, SpringCM's fully integrated, scalable content management solution provides more than 20 core technologies with new version updates delivered directly via the internet every 10 - 12 weeks. No downtime, backups, or recovery, and no big upfront investments or fees.

A breadth of organizations ranging from Fortune 1000 to small- and medium-sized companies have quickly implemented SpringCM solutions to extend the power of SharePoint to address their ECM needs.

SpringCM enables integration with SharePoint to help companies use the best of the collaboration features of SharePoint along with the business process automation benefits of SpringCM's solution. SpringCM allows you to extend workflow and collaboration beyond your firewall, without customizing security or special licenses.

If you are looking to develop and deploy SharePoint for collaboration, workflow, and process automation, you owe it to yourself to explore the easy, fast, secure, and affordable alternative: SpringCM.
